

Studieplan 2013/2014

Master in Information Security

Studieprogramkode

MIS

Innledning

Information technology permeates all aspects of society and has become critical to industry, government, and individual well-being. Securing the vital services and structures and ensuring availability of trustworthy information whenever and wherever it is required has become a field of intensive interdisciplinary research in the recent years. At the same time, information security has become an area of extensive commercial activity with thousands of companies developing and marketing various data protection products. The Master of science in information security provides the students with knowledge and theoretical background, as well as with the skills and attitudes necessary to succeed in this challenging yet eminently rewarding field.

The goals of the study program are achieved through the research-based courses that reflect the research results of the teaching staff to a large extent. This provides the students with thorough knowledge about modern information security technologies.

The study program is closely related to the research community Norwegian Information Security Laboratory (NISlab), which also offers bachelor and PhD studies in information security. This research environment consists of professors that are active in research and internationally recognized as experts in their respective fields. NISlab is a member of Forum for Research and Innovation in Security and Communication (FRISC), a Norwegian network of institutions dedicated to cutting-edge research in information security. NISlab also has strong international relations and its collaboration network includes more than 20 research institutions from more than 10 countries worldwide.

Studiets varighet, omfang og nivå

This is a two-year master program (120 ECTS credits), which is also available part-time over three or four years. The degree awarded upon completion is “Master in Information Security”.

The program has three tracks: **Technology**, **Digital forensics** and **Management**. After the first semester, which is common to all the tracks (see the course structure below), the students have to choose which track they are going to pursue.

The program qualifies the students to proceed to Ph.D. studies.

Forventet læringsutbytte

Knowledge

- The candidate possesses advanced knowledge in the field of information security in general and the following particular topics: computer and network security, security management, incident response, security of critical information infrastructure and legal aspects of information security. The candidate possesses special insight and expertise in information security technology, digital forensics or security management, depending on the chosen program track.
- The candidate possesses thorough knowledge of academic theory and methods in the field of

information security.

- The candidate is capable of applying knowledge in new areas within the field of information security.
- The candidate is familiar with current state-of-the-art in the field of information security.
- The candidate possesses thorough knowledge of scientific methodology, needed to plan and carry out research and development projects in the field of information security.

Skills

- The candidate is capable of analyzing existing theories, methods and interpretations of theories within the field of information security as well as solving theoretical and practical problems independently.
- The candidate is capable of using independently relevant methods in research and development in the field of information security. These methods include literature study, logical reasoning and performing scientific experiments together with interpreting their results.
- The candidate is capable of performing critical analysis of different information sources and applying the results of that analysis in academic reasoning and structuring and formulating scientific problems.
- The candidate is capable of completing an independent research and development project of moderate size under supervision (example: the master thesis), adhering to the current code of ethics in scientific research.
- The candidate is capable of carrying out a plan of a research project under supervision.

General competence

- The candidate is capable of analyzing academic, professional and research problems.
- The candidate is capable of using knowledge and skills to carry out advanced tasks and projects.
- The candidate is capable of imparting comprehensive independent work in the field of information security. The candidate also mastered the terminology in the field of information security.
- The candidate is capable of communicating academic issues, analysis and conclusions both with experts in the field of information security and with the general audience.
- The candidate is capable of contributing to innovation and innovation processes.

Målgruppe

There are three focus groups for this study program:

1. Undergraduate students entering the program as a continuation of their bachelor degree without any prior work experience.
2. Industry students (or students in the private/public sector in general) looking for a full-time or part-time master program, which is flexible and can be adapted to their employers' needs and their own individual needs.
3. International students: exchange students (arriving for a single semester only), full-time students, and part-time students.

Opprettskrav og rangering

To qualify for admission, an applicant must have a bachelor degree in computer science or another field relevant for information security (mathematics, electrical engineering, physics, etc.). The applicant must document that he/she has at least 10 ECTS credits in mathematics/statistics and at least 30 ECTS credits in computer science subjects (for example, computer programming, theory of

algorithms, databases, computer networking, etc.) at the bachelor level. A grade point average (GPA) of at least C on the bachelor studies is required.

Graduate studies in information security require a somewhat different mathematical platform than the one included in most bachelor studies. To master the theoretical topics included in the master program we recommend that the students attend the consultancy sessions related to certain topics in the field of mathematics, organized occasionally during the course of the studies.

Studiets innhold, oppbygging og sammensetning

The program is offered in a flexible manner to fit well to all the three target groups of students. In general, on-campus presence is *required* only three times per semester (1-3 days each time), for a start-up session, for mid-term exams/presentations (and a start-up session of the second part of the semester) and for final exams/presentations. Attendance is also strongly recommended for the *initial first two weeks of the program when two preparatory intense short-courses in number theory and theoretical computer science are offered*. All courses are available online, but there will also be sessions on a regular weekly or bi-weekly schedule. The presence on these sessions is not required.

The program has three tracks (paths of study): technology, digital forensics, and management. Students have to choose which track they pursue after the first semester, which is common for all the tracks. The common courses in the first semester cover the core topics in both information security technology, forensics and management: Cryptology 1, Applied information security, IT governance, Legal aspects of information security, Digital forensics 1, and Scientific methodology. In the rest of the study program, each track has a set of specific courses. Elective courses, taken in the 3rd semester, are freely chosen from a common pool of electives. The students have to choose their master thesis topics within their chosen tracks.

Ordinary mandatory courses from other tracks of the program and courses from the master program in media technology and the CIMET (Color in Informatics and Media Technology) master may be included as electives. Students can also use *up to 20 ECTS of the courses at the 3000 level* as a part of their master program. These must however not be part of the necessary credits for admission – if so, they must be replaced by new credits. Some of the courses listed above can also be flexible regarding time, space and teaching format upon request by the students (typically, a course may be taken in a different semester through self-study and under individual or group supervision).

Master-level courses from other institutions may be included as electives or may substitute mandatory courses at the discretion of the program director.

The course structure for the part-time students may be composed individually as long the track-specific requirements mentioned above and any course inter-dependencies are respected. The most important course inter-dependencies are the following: 1. Students should start working on their master theses in the semester following the research project planning course, 2. All previous coursework has to be completed before starting work on the master thesis (an exception of 10 missing credits may be tolerated at the discretion of the director of the study program, but only if the missing credits are not relevant for the topic of the master thesis).

Study methods

- Lectures
- Exercises
- Project work

- Essay/Article writing
- Independent study
- Group exercises
- Lab exercises

In addition to the classical study methods requiring presence by the students, the Master program in information security makes extensive use of flexible distance study methods. Every course contains the whole study material in digital form available online, via a special system available to the students once enrolled in the program. Audio recordings of the lectures are available online in most subjects contained in the program and the number of subjects that use video recording of the lectures is increasing very fast as technical possibilities make this form of presentations possible. Video streaming of the lectures is also used, whenever technical possibilities allow this. Many subjects use online exams and the exams requiring physical presence are often organized in distant places across Norway, depending on the number of interested participants.

Tekniske forutsetninger

The students who choose to participate in the study program as distance students, need a broadband Internet connection. Software that is needed is mostly freely available on the Internet. In some courses, commercial products such as MatLab, are required.

As for the practical computer skills, it is expected that the students are capable of using any contemporary operating system (Microsoft Windows, GNU/Linux, MacOS, etc.) both with a graphical user interface and a command line interface.

Sensorordning

Most courses have internal examiners, but some of them have external examiners. The subject Research project planning and the master thesis always have an external examiner.

Internasjonalisering

The students are allowed to travel abroad to do their master theses. The information security group has strong links to many of the leading international academic groups within the field, and the students are encouraged to contact their instructors in the course «Research project planning» to ask for relevant travel opportunities.

Emneoversikt

IMT4421 Scientific methodology - 2013-2014

Emnekode:

IMT4421

Emnenavn:

Scientific methodology

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

Første halvdel av semesteret

Språk:

Engelsk

Forventet læringsutbytte:

Etter endt emne skal studenten

Kunnskap

- kunne analysere sentrale problemstillinger innen vitenskapsteori
- ha inngående kunnskap om sentrale spørsmål innen vitenskapsteori
- kjenne sentral terminologi for vitenskapelige arbeider

Ferdigheter

- foreslå en vitenskapelig problemstilling
- selvstendig kunne planlegge gjennomføringen av et vitenskapelig arbeid
- kunne søke etter akademiske publikasjoner ved hjelp av sentrale databaser for dette
- kunne tilrettelegge og analysere data fra vitenskapelige prosjekter

Generell kompetanse

- kunne lese og analysere akademiske publikasjoner
- kunne rapportere resultater fra vitenskapelige prosjekter, deriblant egenutførte vitenskapelige arbeider
- ha utviklet bevisste etiske holdninger i forhold til hvordan vitenskapelig metodikk anvendes

Emnets temaer:

- Introduksjon til vitenskapsteori
- Hva kjennetegner god forskning
- Forskningsetikk
- Forskning som middel til systematisk fremgang
- Kvantitative og kvalitative forskningsdesign
- Hva karakteriserer gode problemstillinger og hvordan lager man en
- Litteraturstudier
- Metodevalg, inkludert planlegging, gjennomføring, og analyse av eksperimenter/studier.
- Bruk av forskningsdatabaser for problemløsning og forbedring
- Behandling av data/statistikk
- Utarbeidelse av prosjektplan
- Gjennomføring av risikoanalyse og gjennomførbarhetsanalyse

Pedagogiske metoder:

Essay

Forelesninger

Nettbasert Læring

Prosjektarbeid

Veiledning

Pedagogiske metoder (fritekst):

The course will be made accessible for both campus and remote students. Every student is free to choose the pedagogic arrangement form that is best fitted for her/his own requirement. The lectures in the course will be given on campus and are open for both categories of students. All the lectures will also be available on Internet through GUC's learning management system (Fronter).

Vurderingsformer:

Skriftlig eksamen, 3 timer

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Intern og ekstern sensor.

Utsatt eksamen (tidl. kontinuasjon):

Ordinær kontiunasjonseksemene.

Tillatte hjelpeemidler:**Tillatte hjelpeemidler (gjelder kun skriftlig eksamen):**

Engelsk ordbok.

Obligatoriske arbeidskrav:

Godkjent essay

Gjennomført praktisk prosjekt

Ansvarlig avdeling:

Avdeling for informatikk og medieteknikk

Emneansvarlig:

Førstelektor Frode Volden

Læreremidler:

Leedy, P D, and Ormrod, J E: "Practical Research, -Planning and design, 9th ed." Pearson Educational Int. ISBN-10: 0131365665

Samt tilleggs litteratur, utdelt eller gjort tilgjengelig i Fronter.

Klar for publisering:

Ja

Emneside (URL):

<http://www.hig.no/imt/mt/emnesider/imt4421>

IMT4532 Cryptology 1 - 2013-2014

Emnekode:

IMT4532

Emnnavn:

Cryptology 1

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

First half of the fall semester

Språk:

Engelsk

Forventet læringsutbytte:
Knowledge

- The candidate possesses advanced knowledge of classical cryptography, as well as of stream ciphers, block ciphers and public key ciphers.
- The candidate possesses thorough knowledge about theory and scientific methods relevant for cryptology.
- The candidate is capable of applying his/her knowledge in new fields of cryptology.

Skills

- The candidate is capable of analyzing existing theories, methods and interpretations in the field of cryptology and working independently on solving theoretical and practical problems.
- The candidate can use relevant scientific methods in independent research and development in cryptology.
- The candidate is capable of performing critical analysis of various literature sources and applying them in structuring and formulating scientific reasoning in cryptology.
- The candidate is capable of carrying out an independent limited research or development project in cryptology under supervision, following the applicable ethical rules.

General competence

- The candidate is capable of analyzing relevant professional and research ethical problems in cryptology.
- The candidate is capable of applying his/her cryptographic knowledge and skills in new fields, in order to accomplish advanced tasks and projects.
- The candidate can work independently and is familiar with cryptographic terminology.
- The candidate is capable of discussing professional problems, analyses and conclusions in the field of cryptology, both with specialists and with general audience.
- The candidate is capable of contributing to innovation and innovation processes.

Emnets temaer:

1. Classical cryptography - history of cryptography, fundamentals of information theory and its application in cryptography
2. Symmetric ciphers - stream and block ciphers
3. Asymmetric ciphers - fundamentals, RSA
4. Hash functions and digital signatures.

Pedagogiske metoder:

Forelesninger
Oppgaveløsning
Prosjektarbeid

Pedagogiske metoder (fritekst):

Lectures

Numerical exercises

The course will be made accessible for both campus and remote students. Every student is free to choose the pedagogic arrangement form that is best fitted for her/his own requirement. The lectures in the course will be given on campus and are open for both categories of students. All the lectures will also be available on Internet through GUC's learning management system (ClassFrontier).

Project work

Vurderingsformer:

Skriftlig eksamen, 3 timer
Vurdering av prosjekt(er)

Vurderingsformer:

Written exam, 3 hours, counts for 70% of the final mark

Project, counts for 30% of the final mark

Both exam and project must be passed

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Evaluated by the lecturer. An external examiner will be used every 4th year. Next time in the school-year 2014/2015.

Utsatt eksamen (tidl. kontinuasjon):

Ordinary re-sit examination. The project work (if passed) need not be repeated.

Tillatte hjelpeemidler:**Tillatte hjelpeemidler (gjelder kun skriftlig eksamen):**

Calculator, dictionary

Obligatoriske arbeidskrav:

None

Ansvarlig avdeling:

Avdeling for informatikk og medieteknikk

Emneansvarlig:

Professor Slobodan Petrovic

Læreridler:**Books:**

1. Introduction to Cryptography and Coding Theory, 2. edition, Trappe W., Washington L., Prentice Hall, 2006, ISBN: 0131981994.

2. Handbook of Applied Cryptography, Menezes A., <http://www.cacr.math.uwaterloo.ca/hac>

Erstatter:

IMT4531 Introduction to Cryptology

Supplerende opplysninger:

There is room for 50 students on the course.

The students that has already taken course IMT3771 Introduction to cryptology at the bachelor level and continues with the master's program in information security at HiG cannot be exempted from taking the course IMT4532 Cryptology 1 on the master's level since the expected learning outcomes and the evaluation methods in these two courses are different (the written exam is different and there is a compulsory project in IMT4532).

IMT4561 Applied Information Security - 2013-2014

Emnekode:

IMT4561

Emnnavn:

Applied Information Security

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Språk:

Engelsk

Forventet læringsutbytte:

Knowledge

- Candidates should have a solid grounding in core concepts of information security and privacy
- Candidates possess advanced knowledge of security design principles and their influence on security policies and security architecture
- Candidates have advanced knowledge of common vulnerabilities, attack mechanisms, and methods against computer and information systems
- Candidates have thorough knowledge on the theory and methods underlying access control as well as of identification and authentication mechanisms

Skills

- Candidates are capable of applying relevant methods for independent analysis and research on security architectures, their vulnerabilities, and potential attacks against these
- Candidates are able to analyze and critically review literature in the field of information security and are able to apply results from the literature in structuring and formulating arguments and reasoning on information security topics
- Candidates are able to plan and conduct a limited, guided research exercise based on primary literature resulting in a reasoned and coherent report

General Competence

- Candidates are able to conduct translate knowledge and methods in the area of information security to other fields so as to be able to successfully complete advanced tasks and projects in information security
- Candidates are able to work independently and are familiar with core concepts and problems in information security and security architecture
- Candidates are able to contribute to innovations and innovative processes, identifying advanced information security problems and approaches contributing to their solution

Emnets temaer:

- Core concepts in information security and privacy
- Security design principles
- Security policies
- Security architecture: Operating systems and applications
- Access control principles
- Identification and authentication
- Vulnerabilities and attack mechanisms
- Attack methods and malicious software
- Database security

Pedagogiske metoder:

Forelesninger

Annet

Pedagogiske metoder (fritekst):

- Lectures
- Other (tutorials)
- Other (term paper)

The course will be made accessible for both campus and remote students. Every student is free to choose the pedagogic arrangement form that is best fitted for her/his own requirement. The lectures in the course will be given on campus and are open for both categories of students. All the lectures will also be available on Internet through GUC's learning management system (ClassFrontier).

Vurderingsformer:

Annet

Vurderingsformer:

Assessment consists of two parts, pass decision is on cumulative grade of both parts:

- Part 1 is a written examination (3 hours), accounting for 67% of grade
- Part 2 is a term paper, accounting for 33% of grade.

Term paper is evaluated by the lecturer.

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Evaluated by external and internal examiner.

Utsatt eksamen (tidl. kontinuasjon):

A new term paper must be provided and the examination must be re-sat next autumn.

Tillatte hjelpeemidler:**Tillatte hjelpeemidler (gjelder kun skriftlig eksamen):**

IMT4571 IT Governance - 2013-2014

Emnekode:

IMT4571

Emnnavn:

IT Governance

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

Andre halvdel av semesteret

Språk:

Engelsk

Forventet læringsutbytte:**Knowledge**

- The candidate possesses detailed knowledge of IT Governance principles and procedures, and the basic concepts of the ISO 27001 / ISO 27002 standard.
- The candidate possesses thorough knowledge about the overall process for establishment and maintenance of an Information Security Management Systems (ISMS).
- The candidate possesses detailed knowledge about the role of policies, standards and guidelines for controls and is capable of applying his/her knowledge in case studies.

Skills

- The candidate is capable of applying IT Governance principles on practical case-studies, including proposal and evaluation of technical security architectures and solutions.
- The candidate is capable of performing stakeholder analysis, risk assessment and recommending risk treatment plans on limited case-studies.
- The candidate is capable of evaluating the applicability of common security mechanism for various controls given a certain scope and policy for the control.

General competence

- The candidate is capable of analyzing business and organizational needs for an ISMS and has a thorough understanding of security management as a continuous improvement process.
- The candidate can work independently and is familiar with IT Governance terminology.
- The candidate is capable of discussing professional problems such as documentation, decision making processes, implementation plans, operations, reviews and corrective actions, with both IT specialists and general managers.

Emnets temaer:

- Reasons for IT Governance: Compliance, liability, stability
- Organizing information security
- Information security policy and scope
- The risk assessment and statement of applicability
- Identification of risks related to external parties
- Asset management
- Human resources security
- Physical and environmental security
- Equipment security
- Communications and operations management
- Controls against malicious software (malware) and back-ups
- Network security management and media handling
- Exchanges of information
- Electronic commerce services
- E-mail and internet use
- Access control
- Network access control
- Operating system access control
- Application access control and teleworking
- Systems acquisition, development and maintenance
- Cryptographic controls
- Security in development and support processes
- Monitoring and information security incident management
- Business continuity management
- Compliance
- Principles of auditing

IMT4591 Legal Aspects of Information Security - 2013-2014

Emnekode:

IMT4591

Emnnavn:

Legal Aspects of Information Security

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Språk:

Norsk, alternativt engelsk

Forventet læringsutbytte:

Knowledge

- The candidate possesses advanced knowledge in legal aspects especially relevant for information security. This applies particularly to the legal regulation of matters of importance to safeguarding confidentiality, integrity, access and quality.

Skills

- The candidate is capable of performing critical analysis of various literature sources regarding legal aspects of information security.
- The candidate is capable of carrying out an independent limited research or development project in legal aspects of information security under supervision, following the applicable ethical rules.

General competence

- The candidate is capable of analyzing relevant professional and research ethical problems in legal aspects of information security.
- The candidate is capable of applying his/her knowledge about legal aspects of information security in new fields, in order to accomplish advanced tasks and projects.
- The candidate can work independently and is familiar with legal terminology.

Emnets temaer:

Generelle bestemmelser om informasjonssikkerhet, særlig innenfor e-forvaltning

Sikring av personopplysninger ved innsamling, bearbeiding og lagring av opplysninger

Regler for elektronisk kommunikasjon

Pedagogiske metoder:

Forelesninger

IMT4661 - Security Management Dynamics

Forventet læringsutbytte:
Knowledge

- The candidate possesses thorough knowledge of the fundamentals of security management for continuous improvement, as well as the factors that influence the behavior of security systems with regards to continuous improvement.
- The candidate possesses advanced knowledge about theory and scientific methods relevant modeling the dynamics of systems, in particular of security systems.

Skills

- The candidate is capable of analyzing existing theories, methods and interpretations in the field of security management and working independently on solving theoretical and practical problems of continuous improvement of security.
- The candidate can use relevant scientific methods in research and development in security management problems with regards to continuous improvement.
- The candidate is capable of performing critical analysis of various literature sources and applying them in structuring and formulating scientific reasoning in security management problems with regards to continuous improvement.
- The candidate is capable of carrying out an independent limited research or development project in security management problems with regards to continuous improvement under supervision, following the applicable ethical rules.
- The candidate is capable of applying his/her knowledge in problems of in security management with regards to continuous improvement.

General competence

- The candidate is capable of analyzing relevant professional and research ethical problems in security management with regards to continuous improvement.
- The candidate is capable of applying his/her security management knowledge and skills in new fields, in order to accomplish advanced tasks and projects.
- The candidate can work independently and is familiar with security management terminology.
- The candidate is capable of discussing professional problems, analyses and conclusions in the field of security management, both with specialists and with general audience.
- The candidate is capable of contributing to innovation and innovation processes.

Emnets temaer:

- The quality improvement paradox
- Security and quality improvement processes
- Improving the Performance of Computer Security Incident Response Teams (CSIRTs)
- Incident reporting systems and Learning from incidents
- Security risks in the transition to Integrated Operations
- Security-dependent safety. Continuous improvement of security in Critical Infrastructure

Faglig nivå:

Master (syklus 2)

Studiepoeng:

10

Varighet:

Vår

Varighet (fritekst):

Ett semester

Språk:

Norsk, alternativt engelsk

Forventet læringsutbytte:**Kunnskap**

Studenten har etter fullført emne generell kunnskap om sikkerhetsplanlegging og hendelseshåndtering samt fordypning i ett av emnets temaer gjennom det selvstendige prosjektarbeidet.

Den generelle kunnskapen omfatter beredskapsplanlegging for håndtering av forretningskritiske hendelser. Det blir lagt vekt på både mindre hendelser og større hendelser hvor det kan være nødvendig å flytte drift til en annen lokasjon.

Ferdigheter

Studenten er i stand til å utarbeide beredskapsplaner for større og mindre informasjonssikkerhetshendelser.

Studenten er i stand til å lede planleggingsprosessen på en selvstendig måte.

Generell kompetanse

Studenten er i stand til selvstendig å fremskaffe informasjon/litteratur som omhandler sikkerhetsplanlegging og hendelseshåndtering. Videre er studenten i stand til å kritisk vurdere denne informasjonen og bruke den aktivt i beredskapsplanleggingsprosessen.

Studenten er i stand til å kommunisere overlevnte informasjon til andre.

Emnets temaer:

1. Introduksjon og overblikk over hendelseshåndtering beredskapsplanlegging.
2. Planlegging for en beredskapsorganisasjon: Risikostyring, risikostyringens begrensninger, hendelsesrapporteringssystemer, konsekvensanalyse
3. Hendelseshåndtering: forberedelse, organisering, preventive tiltak, deteksjon, hendelsesmelding, reaksjon, gjennoppretting, vedlikehold, operasjonelle problemer for CSIRTS, og organisasjonsmodeller for CSIRTS.
4. Katastrofehåndtering: Forberedelse, gjennomføring, drift og vedlikehold.
5. Kontinuitetsplanlegging: Forberedelse, gjennomføring, drift og vedlikehold.
6. Krisehåndtering og menneskelige faktorer.

All the lectures will also be available on Internet through GUC's learning management system (ClassFronter).

Vurderingsformer:

Skriftlig eksamen, 3 timer

Vurdering av prosjekt(er)

Vurderingsformer:

Totalvurdering bestående av 100 poeng hvorav 50 poeng kan oppnås på prosjektarbeide og 50 poeng på avsluttende 3-timers eksamen. Omregning fra 100-poengskala til A-F-skala skjer i henhold til anbefalt omregningstabell, men emneansvarlig kan i spesielle tilfeller gjøre små justeringer av grenser for å sikre overenstemmelse med de kvalitative beskrivelsene på A-F-skalaen. Både eksamen og prosjektarbeidet må bestås.

Prosjektarbeidet består av et selvstendig arbeid hvor studenten selv må fordype seg i et av emnets temaer. Studenten vil bli veiledet og motta tilbakemeldinger på arbeidet underveis.

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Internal examiner. An external examiner will be used every 4th year. Next time in the school-year 2014/2015.

Utsatt eksamen (tidl. kontinuasjon):

Michael Whitman og Herbert Mattord: Principles of Incident Response and Disaster Recovery.
Thomson, 2007.

Tilleggsliteratur vil bli utdelt eller gjort tilgjengelig på Fronter.

Erstatter:

IMT5161 - Incident response and computer forensics

Supplerende opplysninger:

Dette emnet er tilpasset studenter som følger fleksible-master-programmet og som ikke er tilstede på campus. Alle forelesninger kringkastes over internett i sanntid og lagres også slik at de kan ses i etterkant. Det tas opp både bilde og lyd. Veiledningsmøter kan gjennomføres online så lenge studenten har mikrofon tilgjengelig. Et webcam anbefales også.

Emnet undervises parallelt med bacheloremnet IMT3521.

Students that have already taken course IMT3521 Introduction to security Planning and Incident Handling at bachelor level cannot apply to be exempted from taking IMT4841 Security Planning and Incident Management when studying Master in Information Security, because expected learning outcomes in both courses are different.

IMT3491 Ethical Hacking and Penetration Testing - 2015-2016

Emnekode:

IMT3491

Emnnavn:

Ethical Hacking and Penetration Testing

Faglig nivå:

Bachelor (syklus 1)

Studiepoeng:

5

Varighet:

Høst

Språk:

Engelsk

Forutsetter bestått:

IMT2282 Operating systems

Anbefalt forkunnskap:

Master students must document that they have achieved learning outcomes equivalent to IMT2282
Operating systems

Forventet læringsutbytte:

Knowledge:

- Explain how a penetration test is planned, executed, documented and terminated.
- Account for vulnerabilities in general and common services running on internal and external servers for a generic company.
- Predict client side vulnerabilities and use the new methods for security breaches that may occur here.

Skills:

- Master the most common hacking and penetration testing tools and apply these tools to perform simple penetration testing tasks.
- Carry out structured and effective search for security issues in computer systems and computer networks.
- Construct effective penetration tests given existing threats towards software, networks, and network services.
- Use and abuse access to one system in order to gather more information about the networks and services used by this system.

General competence:

- Awareness of vulnerabilities in software both at server and client side, with an extra focus on network applications.
- Sensitivity for potential vulnerabilities in the computer systems and networks of a generic company, and ability to make an analysis of potential threats based on a network description.
- Overview of a wide set of tools for testing and accessing systems and networks.

Emnets temaer:

- Ethical hacking and penetration testing – definitions
- Penetration testing methodologies
- Hands-on penetration testing

Pedagogiske metoder:

Forelesninger

Gruppearbeid

Lab.øvelser

Oppgaveløsning

Pedagogiske metoder (fritekst):

The course will be made accessible for both campus and remote students. Every student is free to choose the pedagogic arrangement form that is best fitted for her/his own requirement. The lectures in the course will be given on campus and are open for both categories of students. All the lectures will also be available on Internet through GUC's learning management system (Fronter).

Vurderingsformer:

Skriftlig eksamen, 2 timer

Vurdering av prosjekt(er)

Digital eksamen (leveringsform se tekstfelt)

Vurderingsformer:

- Digital OR written exam, (66%), depending on the number of students the exam might be oral
- Project (34%)
- Both parts must be passed

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Evaluated by internal examiner. External examiner is used periodically (every four years, next time in 2014/2015).

Utsatt eksamen (tidl. kontinuasjon):

- No re-sit examination – projects and exam are closely connected and related
- New project(s) and exam at next course dates

Tillatte hjelpeemidler:**Tillatte hjelpeemidler (gjelder kun skriftlig eksamen):**

None.

Obligatoriske arbeidskrav:

One or two approved exercises, further information announced at course start.

Ansvarlig avdeling:

Avdeling for informatikk og medieteknikk

Emneansvarlig kobling:

IMT3761 Informasjonskrigføring - 2015-2016

Emnekode:

IMT3761

Emnnavn:

Informasjonskrigføring

Faglig nivå:

Bachelor (syklus 1)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

Siste halvdel av høstsemester

Språk:

Norsk

Forventet læringsutbytte:

Kunnskap

- Forklare hva informasjonskrigføring er
- Formulere hvordan informasjonskrigføring benyttes i krigføring, terrorisme og kriminalitet
- Gjøre rede for hvordan næringsliv og offentlig sektor kan beskytte seg mot informasjonskrigføring

Ferdigheter

- Følge reelle informasjonsoperasjoner
- Avsløre og gjenkjenne forsøk på psykologisk manipulasjon
- Velge indikatorer for å påvise at man er utsatt for informasjonskrigføring
- Planlegge og tilrettelegge for beskyttelse av bedrifter eller organisasjoner mot informasjonskrigføring

Generell kompetanse

- Anerkenne samfunnets avhengighet av informasjonssystemer og at denne avhengigheten gjennom psykologisk manipulering, etterretning og målrettet ødeleggelse kan brukes til å utøve makt overfor enkeltpersoner, grupper og nasjonalstater
- Ta ansvar for beskyttelse av bedrifter eller organisasjoner i tråd med juridiske føringer

Emnets temaer:

- Informasjonskrigføringens terminologi og innhold
- Cyber space som operasjonsmiljø
- Våpen som brukes i informasjonskrigføring
- Introduksjon til psykologien bak manipulering
- Kunnskapsledelse (knowledge management)
- Verdivurdering
- Kunnskapsbaserte cyber-operasjoner

Pedagogiske metoder:

Forelesninger

Gruppearbeid

Emnnavn:

Information Security Economics 1

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

Last part of Autumn semester

Språk:

Engelsk

Anbefalt forkunnskap:

IMT 4762 Risk Management 1

Forventet læringsutbytte:

Knowledge

- The candidate possesses advanced knowledge about the challenges and current practices in security decision making
- The candidate possesses thorough knowledge in financial models and security metrics
- The candidate is capable of applying his/her knowledge in financial models to support security decision making

Skills

- The candidate is able to analyze financial models and theory and apply these to security decision making situations
- The candidate is able to carry out a limited and focused security decision making process under supervision
- The candidate is able to carry out critical analysis of various literature sources on security economics and evaluate the practical implication on security decision making

General competence

- The candidate is capable of analyzing relevant professional and research results and experiences in security economics, particularly financial models for security decision making
- The candidate is capable of applying his/her knowledge and skills in financial models to security decision making processes
- The candidate can work independently and is familiar with the challenges and current practices in security decision making
- The candidate is capable of discussing professional problems, analyses and conclusions in the field of security decision making, both with specialists and with general audience
- The candidate is capable of contributing to innovation and innovation processes

Emnets temaer:

1. European Unions (EU) view on information security economics
2. Current industrial practices in information security economics
3. Decision making in information security risk management
4. Financial models
5. Application of financial models as information security decision support

Pedagogiske metoder:

Forelesninger

Prosjektarbeid

Pedagogiske metoder (fritekst):

Students are recommended to work in groups with the project. Every group must have no more than 3 members. It is also possible to complete the project individually. To ensure fairness, course deliverable grading will depend on deliverable quantity, quality and the number of contributing students.

The course will be made accessible for both campus and remote students. Every student is free to choose the pedagogic arrangement form that is best fitted for her/his own requirement. The lectures in the course will be given on campus and are open for both categories of students. All the lectures will also be available on Internet through GUC's learning management system (ClassFronter).

Vurderingsformer:

Muntlig, individuelt
Vurdering av prosjekt(er)

Vurderingsformer:

- Project – 49%
- Oral exam (individual) – 51%
- Both parts must be passed

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Evaluated by external and internal examiner.

Utsatt eksamen (tidl. kontinuasjon):

For the oral exam: Re-sit August 2016

Emnnavn:

Intrusion detection and prevention

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

First half of the autumn semester

Språk:

Engelsk

Forventet læringsutbytte:
Knowledge

The candidate possesses advanced knowledge in detection and prevention of intrusions in modern computer systems and networks.

The candidate possesses thorough knowledge about theory and scientific methods relevant for intrusion detection.

The candidate is capable of applying his/her knowledge in new fields of intrusion detection and prevention.

Skills

The candidate is capable of analyzing existing theories, methods and interpretations in the field of intrusion detection and working independently on solving theoretical and practical problems.

The candidate can use relevant scientific methods in independent research and development in intrusion detection.

The candidate is capable of performing critical analysis of various literature sources and applying them in structuring and formulating scientific reasoning in the field of intrusion detection and prevention.

The candidate is capable of carrying out an independent limited research or development project in intrusion detection under supervision, following the applicable ethical rules.

General competence

The candidate is capable of analyzing relevant professional and research ethical problems in the field of intrusion detection.

The candidate is capable of applying his/her knowledge and skills in new fields, in order to accomplish advanced tasks and projects.

The candidate can work independently and is familiar with terminology in the field of intrusion detection and prevention.

The candidate is capable of discussing professional problems, analyses and conclusions in the field of intrusion detection and prevention, both with specialists and with general audience.

The candidate is capable of contributing to innovation and innovation processes.

Emnets temaer:

1. Definition and classification of IDS systems
2. Basic elements of attacks against computer networks and their detection
3. Misuse-based IDS
4. Anomaly-based IDS
5. Testing IDS and measuring their performances

Høst

Varighet (fritekst):

Andre halvdel av semesteret

Språk:

Engelsk

Forventet læringsutbytte:

The course contributes towards the following learning outcomes:

Knowledge

- Possesses advanced knowledge within the area covered by the Master Programme.
- Possesses specialized insight and good understanding of the research frontier in a selected part of the topic covered by the Master Programme.

Skills

- Is able to analyze existing theories, methods and interpretations and to challenge established knowledge and practice in the media technology area.
- Is able to use relevant and suitable methods when carrying out research and development activities in the area of media technologyF4: Is able to critically review relevant literature when solving new or complex problems and is able to integrate the findings into the proposed solution.
- Is able to plan and complete an independent and limited research or development project with guidance and in adherence to research ethics.

Having completed the course, the students should have:

- advanced level of understanding of assumptions and models on which risk analysis methods are based .
- deep understanding of how different assumptions/models influence outcomes of different risk analysis methods.

Emnets temaer:

- Classifications of Risk Management methods
- Examples of Risk Management Methods.
- Decision theory
- Risk, Threat and vulnerability discovery
- Uncertainty
- Game theory

Pedagogiske metoder:

Forelesninger

Oppgaveløsning

Pedagogiske metoder (fritekst):

The course will be made accessible for both campus and remote students. Every student is free to choose the pedagogic arrangement form that is best fitted for her/his own requirement. The lectures in the course will be given on campus and are open for both categories of students. Slides from the lectures will also be available on Internet through GUC's learning management system (Fronter).

Vurderingsformer:

Annet

Vurderingsformer:

- Written exam 3 hours (alternatively oral exam at the discretion of the course responsible): 51%
- Projects: 49%.
- Both parts must be passed.

To ensure fairness, course deliverable grading will depend on deliverable quantity, quality and the number of contributing students.

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Evaluated by external and internal examiner.

Utsatt eksamen (tidl. kontinuasjon):

For the written exam: Re-sit August 2016

Tillatte hjelpeemidler:

D: Ingen trykte eller håndskrevne hjelpeemidler tillatt. Bestemt, enkel kalkulator tillatt.

Tillatte hjelpeemidler (gjelder kun skriftlig eksamen):

Approved calculator

Obligatoriske arbeidskrav:

Draft project report including scenario suitable as a basis for the other chapters. The draft report must be submitted via Fronter within 10 days of the first lecture.

Supplerende opplysninger:

This course is intended for students who want to work independently on a particular topic of his/her interest. The student needs to find a supervisor by him/herself. The supervisor and the student will need to agree on a topic together. Topics can be for example (list is not exclusive):

- * studying a particular topic from literature
- * investigating a particular open research problem
- * performing experiments on a research topic

In general the student will write a report on his studies or findings that can be evaluated either by the supervisor or by an external examiner. Another option for the evaluation could be writing an article for a publication or a presentation at a conference or an oral exam with the supervisor or a third person.

Students are not allowed to take both IMT4881 Specialization course 5 ECTS and IMT4882 Specialization course II 10 ECTS (either IMT4881 or IMT4882).

Forventet læringsutbytte:

Knowledge

- Candidates are expected to possess in-depth knowledge of modelling techniques for secure computer systems
- Candidates should have thorough knowledge of models and mechanisms for identification and authentication mechanisms
- Candidates are capable of applying methods for security analysis to novel domains in a rigorous and systematic way

Skills

- Candidates are expected to be capable of identifying suitable modelling techniques for analysing security requirements
- Candidates are able to undertake a research study based in part on primary literature, formulating a concise and reasoned review of such literature in the form of a structured article
- Candidates are able to apply relevant scientific methods in security modelling and analysis

General Competence

- Candidates are able to understand and analyze the professional, ethical, and privacy-related problems arising from the design and implementation of security models and mechanisms
- Candidates are familiar with terminology and concepts in security modelling and analysis and selected areas of information security, permitting independent work in the area
- Candidates are capable of contributing to innovation and innovation processes in information security
- Candidates are capable of discussing information security problems, particularly related to identification and authentication and security models with a specialist and also general audience.

Emnets temaer:

- Identification and authentication mechanisms
- Access control models and formalisms
- Decidability results and limitations of access controls and security models
- Security models, including the Bell-LaPadula, role-based access control, and Chinese Wall models
- Information theoretic models of information flow and covert channels
- Developmental assurance and evaluation criteria (optional)

IMT4532 Cryptology 1

Forventet læringsutbytte:
Knowledge

- The candidate possesses advanced knowledge in generating primitive feedback polynomials for application in stream ciphers based on linear feedback shift registers, constructing highly non-linear S-boxes for application in block ciphers, linear and differential cryptanalysis of block ciphers as well as primality testing, factoring large integers and discrete logarithm.
- The candidate possesses thorough knowledge about theory and scientific methods relevant for cryptology.
- The candidate is capable of applying his/her knowledge in new fields of cryptology.

Skills

- The candidate is capable of analyzing existing theories, methods and interpretations in the field of cryptology and working independently on solving theoretical and practical problems.
- The candidate can use relevant scientific methods in independent research and development in cryptology.
- The candidate is capable of performing critical analysis of various literature sources and applying them in structuring and formulating scientific reasoning in cryptology.
- The candidate is capable of carrying out an independent limited research or development project in cryptology under supervision, following the applicable ethical rules.

General competence

- The candidate is capable of analyzing relevant professional and research ethical problems in cryptology.
- The candidate is capable of applying his/her cryptographic knowledge and skills in new fields, in order to accomplish advanced tasks and projects.
- The candidate can work independently and is familiar with cryptographic terminology.
- The candidate is capable of discussing professional problems, analyses and conclusions in the field of cryptology, both with specialists and with general audience.
- The candidate is capable of contributing to innovation and innovation processes.

IMT4621 Biometrics - 2013-2014

Emnekode:

IMT4621

Emnnavn:

Biometrics

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Vår

Varighet (fritekst):

First half of spring semester

Språk:

Engelsk

Anbefalt forkunnskap:

The course content will be complementary to the course IMT4721 "Authentication".

Forventet læringsutbytte:**Knowledge:**

- The candidate possesses advanced knowledge in Biometrics.
- The candidate possesses thorough knowledge about theory and scientific methods relevant for design, development and operation of biometric access control systems.
- The candidate is capable of applying his/her knowledge in new fields of IT-security systems.

Skills

- The candidate is capable of analyzing existing theories, methods and interpretations in the field of biometrics and working independently on solving theoretical and practical problems.
- The candidate can use relevant scientific methods in independent research and development in biometrics.
- The candidate is capable of performing critical analysis of various literature sources and applying them in structuring and formulating scientific reasoning in biometrics.
- The candidate is capable of carrying out an independent limited research or development project in biometrics under supervision, following the applicable ethical rules.

General competence

- The candidate is capable of analyzing relevant professional and research ethical problems in biometrics.
- The candidate is capable of applying his/her biometric knowledge and skills in new fields, in order to accomplish advanced tasks and projects.
- The candidate can work independently and is familiar with biometric terminology.
- The candidate is capable of discussing professional problems, analyses and conclusions in the field of biometrics, both with specialists and with general audience.
- The candidate is capable of contributing to innovation and innovation processes.

Objectives:

After the course, the students should have acquired:

1. Knowledge about common statistical tools for biometrics
2. Insight into advantages and disadvantages of biometric characteristics
3. Understanding of multimodal biometrics
4. Knowledge of ethical and privacy issues in biometrics.
5. Understanding of the threats and protection mechanisms for biometric data.

Emnets temaer:**Content**

In this course, several key aspects of biometrics are covered. The course begins with an overview of applied statistics and hypothesis tests as well as other common statistical tools for biometrics, and then covers selected biometric concepts, particularly fingerprint recognition, vein recognition, face recognition and iris recognition. To this end, the relevant physiological characteristics, their variability, and potential problems are discussed before analyzing different approaches for each of the attributes to be investigated. In each case, not only benign applications are covered but also potential bottlenecks such as insufficient sample quality along the entire processing chain. The use of multi-biometrics including data fusion is discussed both in the context of robustness against attacks and improving the overall accuracy of the recognition process. The course continues with a discussion of the ethical and privacy-related issues in biometrics, along with possible limitations and technical mitigation mechanisms. Special attention is given to privacy enhancing technologies that provides protection of sensitive biometric data. In this line the course concludes with comparison-on-card approaches and template protection concepts that allow revocation of biometric references.

Key Topics:

- Fingerprint recognition
- Vein recognition
- Face recognition
- Iris recognition
- Multimodal biometrics
- Attack mechanisms
- Privacy Enhancing Technologies

Pedagogiske metoder:

Annet

Pedagogiske metoder (fritekst):**Tutorial:**

Afternoon sessions with seminar discussion and practical tasks.

Assignment:

Students should provide a research report (term paper) on a topic that is chosen by the student in coordination with the lecturer.

The course will be made accessible for both campus and remote students. Every student is free to choose the pedagogic arrangement form that is best fitted for her/his own requirement. The lectures in the course will be given on campus and are open for both categories of students. All the lectures will also be available on Internet through GUC's learning management system (ClassFronter).

Vurderingsformer:

Annet

Vurderingsformer:

1. If the student decides to conduct a term paper the grading will be based on two elements with the following weighting:

- Written examination in English (3 hours): 67%
- Term paper and oral presentation of term paper results: 33%.
- Both parts of the assessment have to be passed to pass the course.

2. Otherwise the final exam will be weighted 100%.

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Written exam will be graded by an external examiner.

Term paper and oral presentation will be graded by an internal examiner

Utsatt eksamen (tidl. kontinuasjon):

Ordinary re-sit examination.

IMT4571 IT Governance - 2014-2015

Emnekode:

IMT4571

Emnnavn:

IT Governance

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Høst

Varighet (fritekst):

Andre halvdel av semesteret

Språk:

Engelsk

Forventet læringsutbytte:**Knowledge**

- The candidate possesses detailed knowledge of IT Governance principles and procedures, and the basic concepts of the ISO 27001 / ISO 27002 (2005) standard.
- The candidate possesses thorough knowledge about the overall process for establishment and maintenance of an Information Security Management Systems (ISMS).
- The candidate possesses detailed knowledge about the role of policies, standards and guidelines for controls and is capable of applying his/her knowledge in case studies.

Skills

- The candidate is capable of applying IT Governance principles on practical case-studies, including proposal and evaluation of technical security architectures and solutions.
- The candidate is capable of performing stakeholder analysis, risk assessment and recommending risk treatment plans on limited case-studies.
- The candidate is capable of evaluating the applicability of common security mechanism for various controls given a certain scope and policy for the control.

General competence

- The candidate is capable of analyzing business and organizational needs for an ISMS and has a thorough understanding of security management as a continuous improvement process.
- The candidate can work independently and is familiar with IT Governance terminology.
- The candidate is capable of discussing professional problems such as documentation, decision making processes, implementation plans, operations, reviews and corrective actions, with both IT specialists and general managers.

Emnets temaer:

- Reasons for IT Governance: Compliance, liability, stability
- Organizing information security
- Information security policy and scope
- The risk assessment and statement of applicability
- Identification of risks related to external parties
- Asset management
- Human resources security
- Physical and environmental security
- Equipment security
- Communications and operations management
- Controls against malicious software (malware) and back-ups
- Network security management and media handling
- Exchanges of information
- Electronic commerce services
- E-mail and internet use
- Access control
- Network access control
- Operating system access control
- Application access control and teleworking
- Systems acquisition, development and maintenance
- Cryptographic controls
- Security in development and support processes
- Monitoring and information security incident management
- Business continuity management
- Compliance
- Principles of auditing

IMT4621 Biometrics - 2014-2015

Emnekode:

IMT4621

Emnnavn:

Biometrics

Faglig nivå:

Master (syklus 2)

Studiepoeng:

5

Varighet:

Vår

Varighet (fritekst):

First half of spring semester

Språk:

Engelsk

Anbefalt forkunnskap:

The course content will be complementary to the course IMT4721 "Authentication".

Forventet læringsutbytte:**Knowledge:**

- The candidate possesses advanced knowledge in Biometrics.
- The candidate possesses thorough knowledge about theory and scientific methods relevant for design, development and operation of biometric access control systems.
- The candidate is capable of applying his/her knowledge in new fields of IT-security systems.

Skills

- The candidate is capable of analyzing existing theories, methods and interpretations in the field of biometrics and working independently on solving theoretical and practical problems.
- The candidate can use relevant scientific methods in independent research and development in biometrics.
- The candidate is capable of performing critical analysis of various literature sources and applying them in structuring and formulating scientific reasoning in biometrics.
- The candidate is capable of carrying out an independent limited research or development project in biometrics under supervision, following the applicable ethical rules.

General competence

- The candidate is capable of analyzing relevant professional and research ethical problems in biometrics.
- The candidate is capable of applying his/her biometric knowledge and skills in new fields, in order to accomplish advanced tasks and projects.
- The candidate can work independently and is familiar with biometric terminology.
- The candidate is capable of discussing professional problems, analyses and conclusions in the field of biometrics, both with specialists and with general audience.
- The candidate is capable of contributing to innovation and innovation processes.

Objectives:

After the course, the students should have acquired:

1. Knowledge about common statistical tools for biometrics
2. Insight into advantages and disadvantages of biometric characteristics
3. Understanding of multimodal biometrics
4. Knowledge of ethical and privacy issues in biometrics.
5. Understanding of the threats and protection mechanisms for biometric data.

Emnets temaer:**Content**

In this course, several key aspects of biometrics are covered. The course begins with an overview of applied statistics and hypothesis tests as well as other common statistical tools for biometrics, and then covers selected biometric concepts, particularly fingerprint recognition, vein recognition, face recognition and iris recognition. To this end, the relevant physiological characteristics, their variability, and potential problems are discussed before analyzing different approaches for each of the attributes to be investigated. In each case, not only benign applications are covered but also potential bottlenecks such as insufficient sample quality along the entire processing chain. The use of multi-biometrics including data fusion is discussed both in the context of robustness against attacks and improving the overall accuracy of the recognition process. The course continues with a discussion of the ethical and privacy-related issues in biometrics, along with possible limitations and technical mitigation mechanisms. Special attention is given to privacy enhancing technologies that provides protection of sensitive biometric data. In this line the course concludes with comparison-on-card approaches and template protection concepts that allow revocation of biometric references.

Key Topics:

- Fingerprint recognition
- Vein recognition
- Face recognition
- Iris recognition
- Multimodal biometrics
- Attack mechanisms
- Privacy Enhancing Technologies

Pedagogiske metoder:

Annet

Pedagogiske metoder (fritekst):**Tutorial:**

Afternoon sessions with seminar discussion and practical tasks.

Assignment:

Students should provide a research report (term paper) on a topic that is chosen by the student in coordination with the lecturer.

The course will be made accessible for both campus and remote students. Every student is free to choose the pedagogic arrangement form that is best fitted for her/his own requirement. The lectures in the course will be given on campus and are open for both categories of students. All the lectures will also be available on Internet through GUC's learning management system (ClassFronter).

Vurderingsformer:

Annet

Vurderingsformer:

1. If the student decides to conduct a term paper the grading will be based on two elements with the following weighting:

- Written examination in English (3 hours): 67%
- Term paper and oral presentation of term paper results: 33%.
- Both parts of the assessment have to be passed to pass the course.

2. Otherwise the final exam will be weighted 100%.

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Written exam will be graded by an external examiner.

Term paper and oral presentation will be graded by an internal examiner

Utsatt eksamen (tidl. kontinuasjon):

No re-sit examination offered.

Emnnavn:

Security Planning and Incident Management

Faglig nivå:

Master (syklus 2)

Studiepoeng:

10

Varighet:

Vår

Varighet (fritekst):

Ett semester

Språk:

Norsk, alternativt engelsk

Forventet læringsutbytte:**Kunnskap**

Studenten har etter fullført emne generell kunnskap om sikkerhetsplanlegging og hendelseshåndtering samt fordypning i ett av emnets temaer gjennom det selvstendige prosjektarbeidet.

Den generelle kunnskapen omfatter beredskapsplanlegging for håndtering av forretningskritiske hendelser. Det blir lagt vekt på både mindre hendelser og større hendelser hvor det kan være nødvendig å flytte drift til en annen lokasjon.

Ferdigheter

Studenten er i stand til å utarbeide beredskapsplaner for større og mindre informasjonssikkerhetshendelser.

Studenten er i stand til å lede planleggingsprosessen på en selvstendig måte.

Generell kompetanse

Studenten er i stand til selvstendig å fremskaffe informasjon/litteratur som omhandler sikkerhetsplanlegging og hendelseshåndtering. Videre er studenten i stand til å kritisk vurdere denne informasjonen og bruke den aktivt i beredskapsplanleggingsprosessen.

Studenten er i stand til å kommunisere overlevnte informasjon til andre.

Emnets temaer:

1. Introduksjon og overblikk over hendelseshåndtering beredskapsplanlegging.
2. Planlegging for en beredskapsorganisasjon: Risikostyring, risikostyringens begrensninger, hendelsesrapporteringssystemer, konsekvensanalyse
3. Hendelseshåndtering: forberedelse, organisering, preventive tiltak, deteksjon, hendelsesmelding, reaksjon, gjennoppretting, vedlikehold, operasjonelle problemer for CSIRTS, og organisasjonsmodeller for CSIRTS.
4. Katastrofehåndtering: Forberedelse, gjennomføring, drift og vedlikehold.
5. Kontinuitetsplanlegging: Forberedelse, gjennomføring, drift og vedlikehold.
6. Krisehåndtering og menneskelige faktorer.

All the lectures will also be available on Internet through GUC's learning management system (ClassFronter).

Vurderingsformer:

Skriftlig eksamen, 3 timer

Vurdering av prosjekt(er)

Vurderingsformer:

Totalvurdering bestående av 100 poeng hvorav 50 poeng kan oppnåes på prosjektarbeide og 50 poeng på avsluttende 3-timers eksamen. Omregning fra 100-poengskala til A-F-skala skjer i henhold til anbefalt omregningstabell, men emneansvarlig kan i spesielle tilfeller gjøre små justeringer av grenser for å sikre overenstemmelse med de kvalitative beskrivelsene på A-F-skalaen. Både eksamen og prosjektarbeidet må bestås.

Prosjektarbeidet består av et selvstendig arbeid hvor studenten selv må fordype seg i et av emnets temaer. Studenten vil bli veiledet og motta tilbakemeldinger på arbeidet underveis.

Karakterskala:

Bokstavkarakterer, A (best) - F (ikke bestått)

Sensorordning:

Internal examiner. An external examiner will be used every 4th year. Next time in the school-year 2014/2015.

Utsatt eksamen (tidl. kontinuasjon):

Ordinær kontinuasjon på skriftlig eksamen

Tillatte hjelpeemidler:

Tillatte hjelpeemidler (gjelder kun skriftlig eksamen):

Tilleggs litteratur vil bli utdelt eller gjort tilgjengelig på Fronter.

Erstatter:

IMT5161 - Incident response and computer forensics

Supplerende opplysninger:

Dette emnet er tilpasset studenter som følger fleksible-master-programmet og som ikke er tilstede på campus. Alle forelesninger kringkastes over internett i sanntid og lagres også slik at de kan ses i etterkant. Det tas opp både bilde og lyd. Veiledningsmøter kan gjennomføres online så lenge studenten har mikrofon tilgjengelig. Et webcam anbefales også.

Emnet undervises parallelt med bacheloremnet IMT3521.

Students that have already taken course IMT3521 Introduction to security Planning and Incident Handling at bachelor level cannot apply to be exempted from taking IMT4841 Security Planning and Incident Management when studying Master in Information Security, because expected learning outcomes in both courses are different.
